

CRYPTOCURRENCY PAYMENTS

PAYMENTS | BANKING

Mainstream Spending

Give consumers more spending power with i2c's Cryptocurrency Payments solution. Consumers can move their cryptocurrency value off the exchange to a network-certified card product, turning crypto to fiat currency that can be spent anywhere around the globe.

Global Reach

i2c supports more cryptocurrency clients than any other processor globally. This includes customers located in Asia-Pacific, Europe and North America. Our single platform supports cardholders in all 24 time zones with a distributed client support team. Furthermore, i2c is certified with Mastercard®, Visa®, American Express®, and UnionPay® globally, giving consumers comfort that they can spend worldwide in any fiat currency at any time.

End-to-End Lifecycle Support

Once connected to the i2c API, issuers and program managers alike have access to the full suite of platform capabilities. i2c's point and click processing not only enables cryptocurrency card programs, but also value-added services such as Communications Manager, Loyalty and Digital Couponing. So, whether you want to reward specific customer segments or leverage our advanced multi-currency and cooperative authorization flows, the same API makes it all possible.

Deep Cryptocurrency Experience

Unlike other processors, we are highly active in the crypto space. i2c has active customer engagements with some of the largest players in the market. Our customers have chosen i2c over legacy processors because of our unique “building block” stack that gives our customers the ability to innovate and adjust their programs in real-time.
